Education

University of New Orleans

Ph.D., Financial Economics, 2019 anticipated.

Fields: International Finance, Asset Pricing, Corporate Finance, Financial Markets

University of New Orleans

M.S. Financial Economics, 2017.

Qualifying: Microeconomics, Macroeconomics, Corporate Finance, Investments

Northern Michigan University

M.B.A., 2013

Northern Michigan University

B.S., 2011.

Dissertation

“Stock Price Pattern Predictability and Conditional Returns”

Modern computer vision such as Histogram of Oriented Gradients can summarize information from images in a final feature vector (a vector of image information) which can be used for image training and processing. Our paper uses this method with object detection (detecting a smaller image or object in a larger image among noisy data). Combining computer vision with technical chart patterns from Lo, Mamysky, and Wang (2000) we discuss whether image processing can be a useful tool for economists.

Working

Matt Lutey, Neal Maroney.

"Reliability of Stock Price Pattern Predictability"

Using data about nonlinear stock price patterns outlined in Lo, Mamysky, and Wang (LMW, 2000) (i.e., Head and Shoulders) we test the ability of kernel density estimators to uncover the chart patterns and discuss their frequency using an automated bandwidth. This is done for the full CRSP cross section of stocks omitting penny stocks. This feeds in to the second essay "Stock Price Pattern Predictability and Conditional Returns.

Matt Lutey, David Rayome

"A primer on the Ichimoku Cloud"

Previous studies have shown moving averages to have predictive power in excess of macro fundamentals. This paper considers the Ichimoku cloud as a variation of the moving average which is constructed off of the midpoint between high and low values (rather than a smooth average of close). Trading signals are outlined in Linton (2010). Preliminary results show the cloud to achieve profit on a basket of 30 randomly selected stocks and on four major benchmarks. Combining the signals of the Ichimoku cloud and moving averages generates statistically significant excess return.

Matt Lutey

"Comparison of Stock Selection Strategies"

This paper compares rule based stock selection strategies and evaluates them for superior performance. The CAN SLIM system is compared with Warren Buffett's method. The results show simplifying the CAN SLIM method to two criteria based on current earnings and price near 52 week highs can show positive risk adjusted returns. The returns are also tested in a Fama and French 3 factor portfolio. Previous studies of the CAN SLIM system are evaluated and updated to include out of sample testing after publication. This shows viability of backtesting with compustat point in time data. The results are robust to additional benchmarks.

Conferences **Presentations**

An Application of Can Slim Investing in the Dow Jones Benchmark

Presenter - World Business Institute (WBI),
New York, NY, 2017

An Application of Can Slim Investing in the Dow Jones Benchmark

Presenter- Southwestern Finance Association (SWFA),
